

SHAILESH SULAKAY

Hyderabad, India | shaileshsulakay@gmail.com | [+91 7075392139](tel:+917075392139) | [LinkedIn](#)

SUMMARY

Computer Science undergraduate with strong academic performance and solid foundations in algorithms, data structures, and programming. Experienced in building full-stack systems and experimenting with different approaches to problem solving in programming and mathematics. Interested in exploratory research, large-scale systems, and computational problem solving.

EDUCATION

B.Tech in Computer Science and Engineering Anurag University	2023 - 2027
■ CGPA: 9.32(current)	
Higher Secondary Education Sri Chaitanya Junior College	2021 - 2023
■ Percentage: 94.6%	
Secondary Education Sage School	2021
■ CGPA: 9.5	

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, C++,C

Computer Science Foundations: Data Structures, Algorithms, Object-Oriented Programming, Problem Solving,Computer Networks, Operating Systems,DBMS

Web & Systems: Spring Boot, REST APIs, React, Node.js, Express.js

Databases: MySQL, MongoDB(basics)

AI / ML Exposure: TensorFlow, Object Detection, Image Classification, Gemini API, Data Analysis (NumPy, Pandas)

PROJECTS

Smart Campus Resource Management System (In Progress)

- Designing and developing a full-stack campus resource management system to model real-world scheduling, availability, and access constraints using Java, SpringBoot, MySQL & React.js
- Implemented RESTful APIs using Spring Boot and JPA for managing campus entities and transactions.
- Designed relational database schemas in MySQL with a focus on data consistency and efficient querying.
- Exploring system scalability, role-based access, and real-time updates as part of iterative development.

Library Management System (In Progress)

- Building a library management system to understand full-stack architecture and data flow in MERN applications.
- Implemented CRUD operations for managing books and users, focusing on clean API design and modular code structure.
- Analyzing data handling patterns and performance trade-offs between relational and NoSQL databases

Food Reserve-Preserve

- Developed "Food Reserve-Preserve," a tech-driven platform designed to minimize food waste by connecting surplus food donors with NGOs and individuals in need.
- Designed core features like real-time food listing, location-based matching, and a request system for efficient redistribution.
- Earned 10 points in the Design Thinking course for innovative problem-solving and social impact.

CERTIFICATIONS AND ACHIEVEMENTS

AI / Machine Learning & Data

- Google AI/ML Virtual Internship – AICTE EduSkills
- Getting Started with Enterprise-grade AI – IBM
- TensorFlow Badge
- Object Detection & Image Classification Learning Pathways
- Product Image Search Learning Pathways

Programming & Technical Foundations

- Programming in Java (Silver Medal – 86%) – NPTEL
- The Joy of Computing Using Python (Elite) – NPTEL
- Introduction to Operating Systems (52%) – NPTEL
- Badge of Excellence for securing second-highest academic performance
